Machine Learning Engineer specializing in scalable ML platforms and production-grade decisioning systems.

Work Experiences.

Machine Learning Engineer / Product Owner @ ING Milan, IT [Nov.2022-Present]

- Owned the technical delivery and production rollout of ING's on-demand Personal Loan Acceptance Scorecard, enabling real-time credit decisions for new-to-bank customers.
- Architected a YAML-driven feature engineering platform generating 1,000+ features from configuration, reducing development time from days to hours and enabling adoption across 10+ ML projects.
- Engineered scalable ML decisioning pipelines powering always-on pre-approved loan offers, contributing to a 2x YoY increase in loan disbursements
- Built and deployed an Airflow-orchestrated early warning system predicting customer delinquencies across multiple banking products, increasing recovery rates by 40%.
- Built an ML monitoring framework for 10+ production models, reducing monitoring effort from days to hours.

Applied Machine Learning Intern @ Fastweb Milan, IT [Mar.2021-Nov.2021]

- Developed a machine learning classifier designed to drive remuneration processes by predicting salary bands.
- Applied explainable AI analysis to ensure model interpretability for business stakeholders.

<>. Python I MySQL I SHAP I PowerBI

Research Engineering intern @ University of Brescia Brescia, IT [Oct.2018-Mar.2019]

- Conducted research on Bluetooth Low Energy protocol.
- Developed a BLE sniffer for connection debugging, reducing costs by 60% compared to commercial alternatives.

<>. C I Bash I Linux I Computer Network

Publication.

Introduction to Quantum Machine Learning

- Published a peer-reviewed article on quantum machine learning, bridging foundational quantum computing concepts and practical ML applications. [Paper]

<>. Quantum Machine Learning I Research

Education.

Master of Science in Data Science [Feb. 2022]
University of Milano Bicocca I 110/110

Bachelor of Science in Computer Science & Engineering [Oct. 2019]
University of Brescia

Projects.

LAR - Lift Area Ratio

- Developed and published LAR, an open-source Python package providing a population-independent alternative to ROC-AUC for binary classification model evaluation. [Link]

<>. Open-source I PyPi

Smogzilla

- Created an open-source Telegram bot to make air-quality information more accessible, delivering real-time pollution updates and alerts across Italy. [Link]
